

## The Galebreaker Light Ridge System

- ✓ *Improves natural ventilation*
- ✓ *Maximises light in the building*
- ✓ *Optimises livestock environment*
- ✓ *Minimises use of artificial lights*
- ✓ *Fits to new and existing buildings*

# The Galebreaker Light Ridge System

## Ventilation

Allows clean, fresh air into your livestock building, removing stale air, dust, moisture and heat. This helps prevent diseases such as pneumonia, mastitis and scours, reducing the cost of treatments.

## Light

Maximises natural light and visibility throughout the whole building improving working conditions and herd environment. The need for additional roof and artificial lights is minimised, therefore reducing costs.

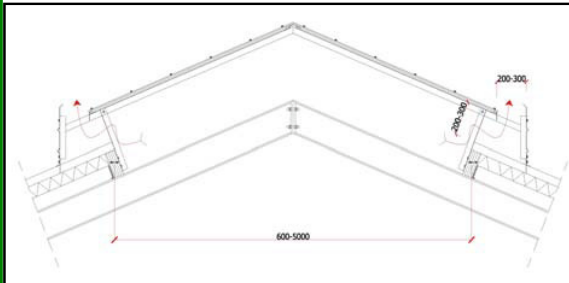

## Benefits

- Healthier environment
- Less requirement for artificial lights
- Money saved on roof materials
- 10 year UV product guarantee
- Fits to new and existing livestock buildings.

## Materials

The Light Ridge structure and all its supports are made from the highest quality aluminium - Galebreaker's Light Ridge System is built to last. The roof panels are constructed using 10mm double walled transparent polycarbonate. The "milky" finish to these panels maximises light within the building, but minimises the "greenhouse effect" inside.

## *Light Ridge Statistics*

Width options:	0.6m - 5m
Air Exhaust Options:	40cm and 60cm
Roof Panels:	10mm Polycarbonate
Roof Pitch:	5 - 45°
Guarantee:	10 year UV

## *Wind Guide Plates*

The Wind Guide Plates are designed to stop any ingress from rain or snow, but also help to create the optimum air draw for your building's ventilation requirements.
