

The new bull pen has a self-locking-safety feed front. It is possible to lock the bull and the cow together and they can be released individually.

Activities surrounding the bull pen are much safer to accomplish, for example to separate the milking cow out of the bull pen.

The feed front is a heavy duty construction with a bottom rail of 76 mm and \varnothing 80 top rail

Neck width is adjustable.

The bull pen consists of:

- Safety feed front with adjustable head lock;
- A door with safety lock;
- Partition barriers, model 03.31;

For a pen with a front width of 300 cm the standard door and front gate with head locks are available. These are mounted to \varnothing 80 mm support posts. The door is provided with a safety lock with removable locking pin.

item no.
